Recommendation Letter for Mr. Armaan Chowdhry

With much pleasure and delight, and being CEO of the company, I am writing this recommendation letter for Mr. Armaan Chowdhry who has been working with Quantum Phinance Consulting Pvt. Ltd. as Business Analyst since December, 2017. He was inducted as one of the business analysts, for our proprietary automation software viz. Sheetkraft which is designed to automate business processes and report for financial institutions.

Adding to the part of being a Business Analyst, Armaan also implemented all the projects as a part of the implementation team. In order to deliver projects successfully, he had to form a good grasp over the financial processes and financial terms. He had to communicate with clients, including C-suite, to understand the flow for business processes and the problem statements that users have, while analysing the implementation on Sheetkraft and breaking it down into a sequence of logical blocks and setting it up on our proprietary platform. He has worked with clients in different domain of financial institutions, including, but not limited to, Banks, Commodity Exchange, Payment Gateways and Asset Management Companies and often he encountered large data; consequently, making use of computational methods to anatomise and generate reports for the clients and draw insights from the data to help clients improve their processes. Furthermore, he has undertaken a forefront role where he engages in discussions while interacting with other senior counterparts at other clients. He has actively guided subordinate team members on software's technical and business aspects. He has helped them apply solutions across multiple clients and clear the doubts if they have any.

Some of his highlighting implementations are ChatBot Analytics, Credit Card Fraud Detection, Buy-Now-Pay-Later Reconciliation and Settlement and ATM Reconciliation for a national bank. These projects are extremely critical business processes for clients. He has performed exceptionally well in handling demanding clients, management of several projects in parallel while being engaged in getting his juniors trained on the Sheetkraft Framework, Excel, SQL and other required tools.

Holding a Mechanical Engineering degree from Mumbai University, one of the eminent engineering institutes in India, did not stop him from taking up the challenging tasks in the IT sector with almost no prior education in Finance. He has impressed us by quickly establishing himself with knowledge of finance and IT tools required for the automation while using his quantitative and analytical competence which is emphasized clearly in his approach with his inquisitive personality to solve problems. It makes me believe that he is an excellent candidate for pursuing data science considering his curiosity with the subject and his ability to grasp

complex concepts easily and your masters program should definitely provide him a defined path for being an expert in this field.

I believe Masters in Data Science program would provide him an opportunity to further stimulate his growth. He has great interpersonal skills and I believe he has the required preparation, maturity and emotional stability to pursue higher studies. So, I strongly recommend him to your university for his enrollment in Masters for Data Science Program.

In case, you have any further queries, please reach out to me at shridhar@quantumphinance.com

Yours Sincerely,

Shridhar Iyer,
Chief Executive Officer,
Quantum Phinance Consulting Pvt. Ltd.
